TASKBOARD

Product Backlog	In Progress	Completed
INFORMIX MONITORING DASHBOARD Review requirements for database monitoring Identify relevant CPU, memory, I/O and performance indicators Check the dashboard behavior and presentation.	INFORMIX MONITORING DASHBOARD • Dashboard development/enhancements using Java, Spring Boot, React and Vite. • Monitoring indicators include CPU, memory, I/O, and performance.	Community research learned the whole script. MVP scope and tech stack agreed: React (VS Code), Java (IntelliJ IDEA), MySQL GitHub repository created and project structure set up
POSTGRESQL DATABASE PERFORMANCE Investigate slow queries Consider suitable indexes Plan backup, restore verification and database heath and checks	POSTGRESQL DATABASE PERFORMANCE • Create/populate a PostgreSQL banking database with 2 million transactions. • Investigate slow queries and optimize with appropriate indexes. • Perform backup/restore testing and a health check.	
LIVE FRAUD DETECTION SYSTEM Review how incoming card transactions are evaluated against rules. Review how suspicious activity is displayed to analysts. Review analyst actions for confirming fraud or dismissing false positivity	LIVE FRAUD DETECTION SYSTEM • Contribute to development and enhancements using Java, TypeScript, HTML, CSS and React.	

WALKTHROUGH

1. What do we need to do to advance this piece of work?	For the dashboard, continue validating the monitoring information and dashboard behavior. For the PostgreSQL work, confirm query improvements and document backup/restore and health-check results. For fraud detection, continue with the assigned development or enhancement tasks and verify the behavior against the project requirements.
2. Is anyone working on anything that is not on the board?	No — all repository and front-end work is tracked on the track board and committed to GitHub.
3. What do we need to finish as a team?	Confirm the current priorities and the acceptance criteria for the active project. Complete the assigned tasks, test the relevant functionality, and capture evidence of the work.
4. Are there any bottlenecks or blockers to the flow of work?	Nonmajor — mostly just getting everyone comfortable with Git workflow and React component structure.

Date:	08/09/2026

Tuesday	1. What did I complete since the last standup?	I worked on the Informix Monitoring Dashboard, which is intended to show database indicators such as CPU, memory, I/O, and performance. Add the specific task or feature you completed during this period.
	2. What am I planning to complete between now and the next standup?	Continue with the next assigned dashboard task, such as development, enhancement, validation, or documenting the result. Replace this with the actual plan you had at the time.
	3. What are my impediments (or risks or problems)?	I must create a list that will tell me what is left so that I cannot risk deploying the wrong thing.

Wednesday	1. What did I complete since the last standup?	I worked on the PostgreSQL banking database project involving 2 million transactions. Add which specific activity you completed that day: database setup/data loading, slow-query investigation, indexing, backup/restore testing, or health check.
	2. What am I planning to complete between now and the next standup?	Continue with the next PostgreSQL task that was planned, such as query analysis, index validation, restore verification, or documenting the health check.
	3. What are my impediments (or risks or problems)?	Deciding on a color palette that matched my branding took a few rounds of revisions.

Date:	10/09/2026	
Thursday	1. What did I complete since the last standup?	Completed the color palette page and continued front-end development, tightening up styling consistency across the remaining screens.
	2. What am I planning to complete between now and the next standup?	Finish the whole front-end since I got the color palette and some git version stuff.
	3. What are my impediments (or risks or problems)?	Making the front-end connected with the backend has been a struggle, so I must fix that as soon as possible.

Date:	11/09/2026	
Friday	1. What did I complete since the last standup?	I contributed to development or enhancements for the live fraud detection system. Add the exact features, code change, test or review you completed.
	2. What am I planning to complete between now and the next standup?	Continue with the next assigned development, enhancement, or testing task. Identify the relevant part of the transaction rules, suspicious-activity display, or analyst review only if you worked on it.
	3. What are my impediments (or risks or problems)?	Making sure that the simulator works, and I can confirm the alerts regarding the fraud.
